Managed IT Services

- Efficiency
- Increased Productivity
- Unlimited Expertise

Smart Office Connectivity

The VPN system is the secure medium to connect remote offices or mobile users to a central network. we aim at offering personalized solutions for the issues related with Hosting an IP based networking. We are adept in solving both small and large scale issues that rise over a period. Flexible networking and storage solutions are offered addressing specific problems with the help of VPN or L3 MPLS technology.

Managed Security Services

Managed security services provide outsourced monitoring and control of security devices and systems. General services involve managed firewall, interference detection, the virtual private network, vulnerability scanning, patching, upgrading, and anti-virus services. HEX64's high-level Security Operations Center is available 24/7 to monitor security incidences and reduce the number of operational security personnel, which an organization needs to hire, train and retain them to manage an agreeable protection presence.

ISO 9001:2015 Certified

Cloud Integration Service

Cloud-based solutions are gaining emphasis and companies across the world are adopting them for exploring its benefits. The forward-thinking companies demand cost-effective, secure and accessible services. This is possible through an integration platform which could assemble a diverse portfolio of applications. Services include a broad portfolio of miscellaneous software and hardware products for enabling public, private and hybrid cloud systems.

Network Penetration

HEX64 believes that networking security is of primary importance as a huge amount of confidential data is stored, retrieved and sent in the entire cycle of the process. In the world of networking security, the significance of network penetration testing is very high. Giving you a better view of our ways of working, we help you get the ways of a hacker's mind. Breaking into your security system lead us to alert you of your security preparedness.

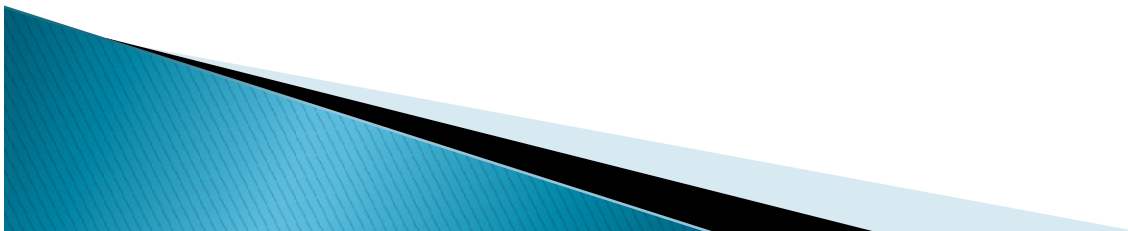

Data Security Services

We also provide Data Security Incident Management services and Managed DLP. We help create a roadmap for enterprises, offering various engagement models that optimally used solutions to achieve maximum protection against data breaches.

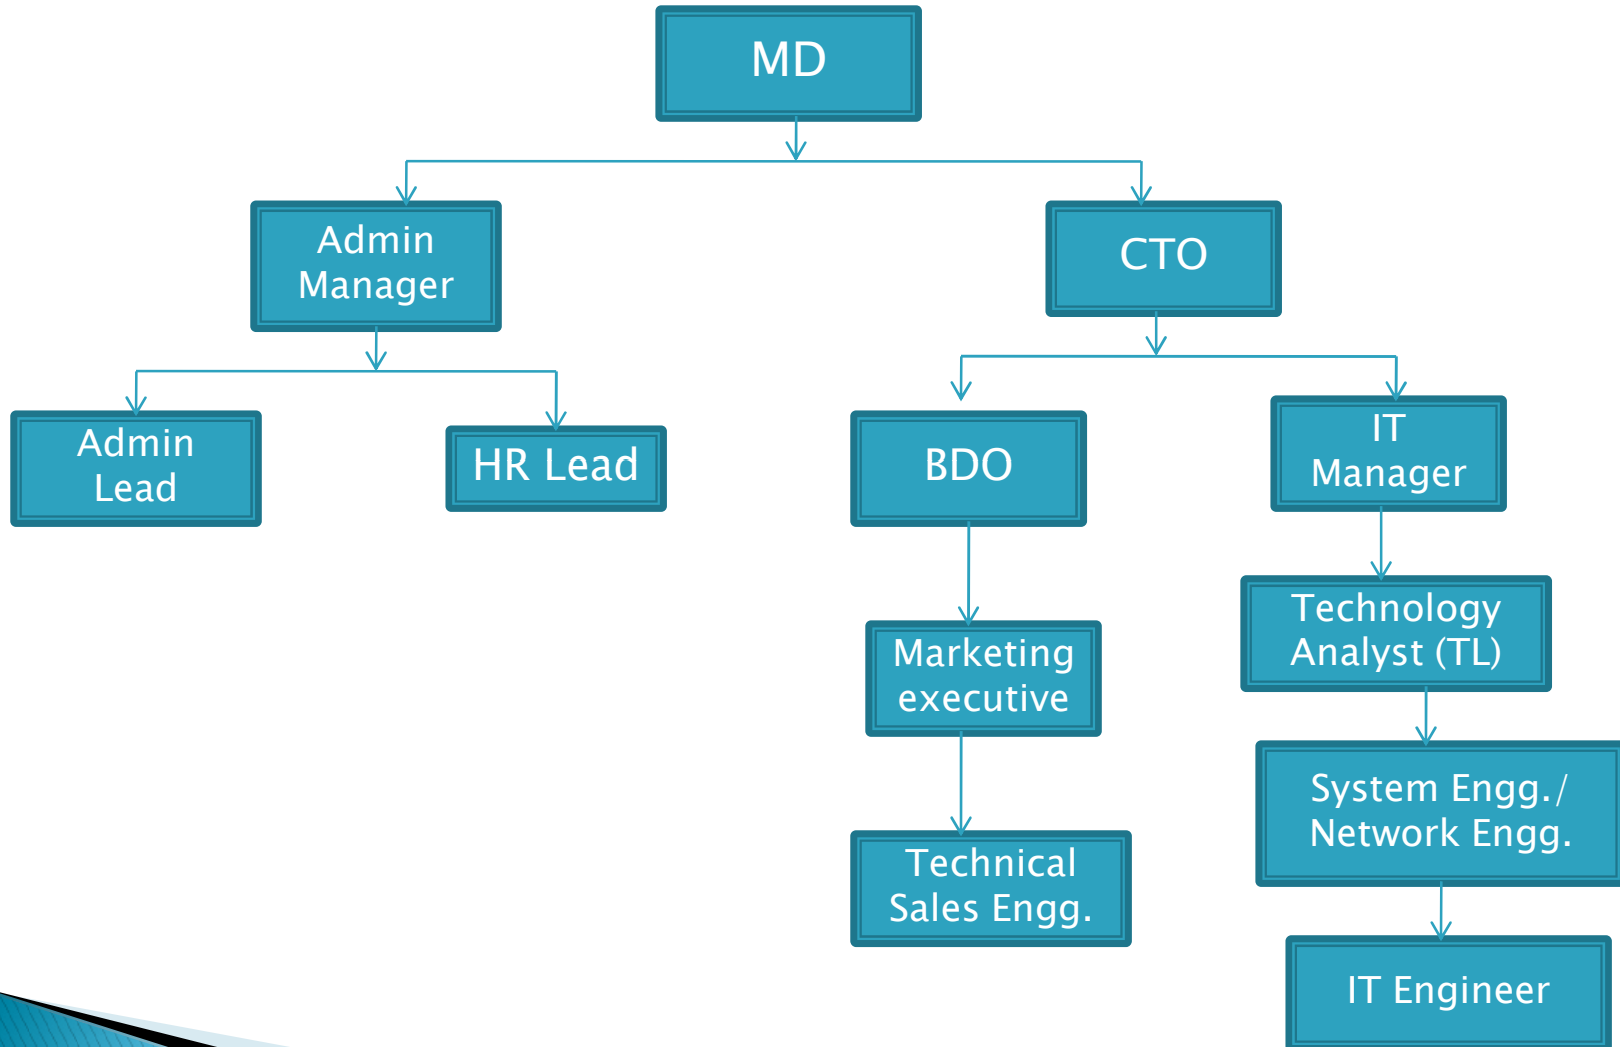

Our approach

- Collecting infrastructure information.
- Reviewing the requirement.
- Creating draft plan.
- Discussing the plan with client so we both are on same page.
- Creating final plan.
- Phase-I implementation (pilot)
- Collecting review and feedback
- Subsequent phase implementation.
